

ISO 9000 `QUALITY WORKSHOPS`
A Low Cost Route to Certification

Horwood International provide training workshops and assisted implementation arrangements known as `Quality Workshops`.

The Workshop could be arranged as a Professional Association's service to its Members, a Manufacturer's service to its Dealers, a co-operative venture by any Group of organisations with common interests, or a group of activities within a large organisation.

HI Quality Workshops are very successful for the following reasons:-

- They provide lowest cost route to ISO 9000
- Discussions and interpretations of the requirements of the Standard by 'peer group' executives are very thorough
- Syndicate working develops excellent results very quickly
- HI Workshops include the necessary minimum of on-site assistance to achieve Certification.
- As much as possible of the work is done by the delegates which makes best advantage of local knowledge and equips delegates to develop and maintain the system after it is installed
- The Workshop benefits from the massive experience and investment by HI in providing Quality Consultancy to hundreds of Companies under UK Government Schemes. Without this investment the service could not be provided at the price

Main elements of a HI Quality Workshop are:-

- Tailored to suit members' requirements
- A number of members with similar objectives working together for cost-effective results
- Each member participates with one or more Delegates
- Discussion within the 'peer group' generates rapid and comprehensive interpretation and understanding
- A full set of notes are provided for each delegate
- The costs are shared thereby providing excellent value for money
- Arranged to suit the requirements of the group, including:-
 - Venue
 - Content and Timing Schedule
 - Number of groups / courses
 - Trainer to Delegate ratio

- Phase 1:** Trains Quality Co-ordinators and provides a fully documented system.
- Phase 2:** Supports implementation to achieve Certification in good time and at minimum cost.
